High Performance Liquid Chromatography (HPLC) Mass Spectrometry (MS) – Purity Test

PEAK LIST			Number of detected peaks: 3	
	Time (min)	Area	%Area	
1	3.86	6.99E+05	44.12	Na Formate
2	8.40	2.16E+03	0.14	
3	10.40	8.82E+05	55.74	ITPP

Peak at 3.86 minutes consists of sodium formate adducts – an interaction between formate ions in the solvent and sodium from the sample. It is not counted as an impurity.

Adjusted purity without Na Formate 99.75

Mass Spectrometry (MS) – Identity Test

Identity confirmed using HPLC-MS

Molecular weight calculated using monoisotopic m/z values from mass spectrum

Expected monoisotopic mass : 605.83 Da

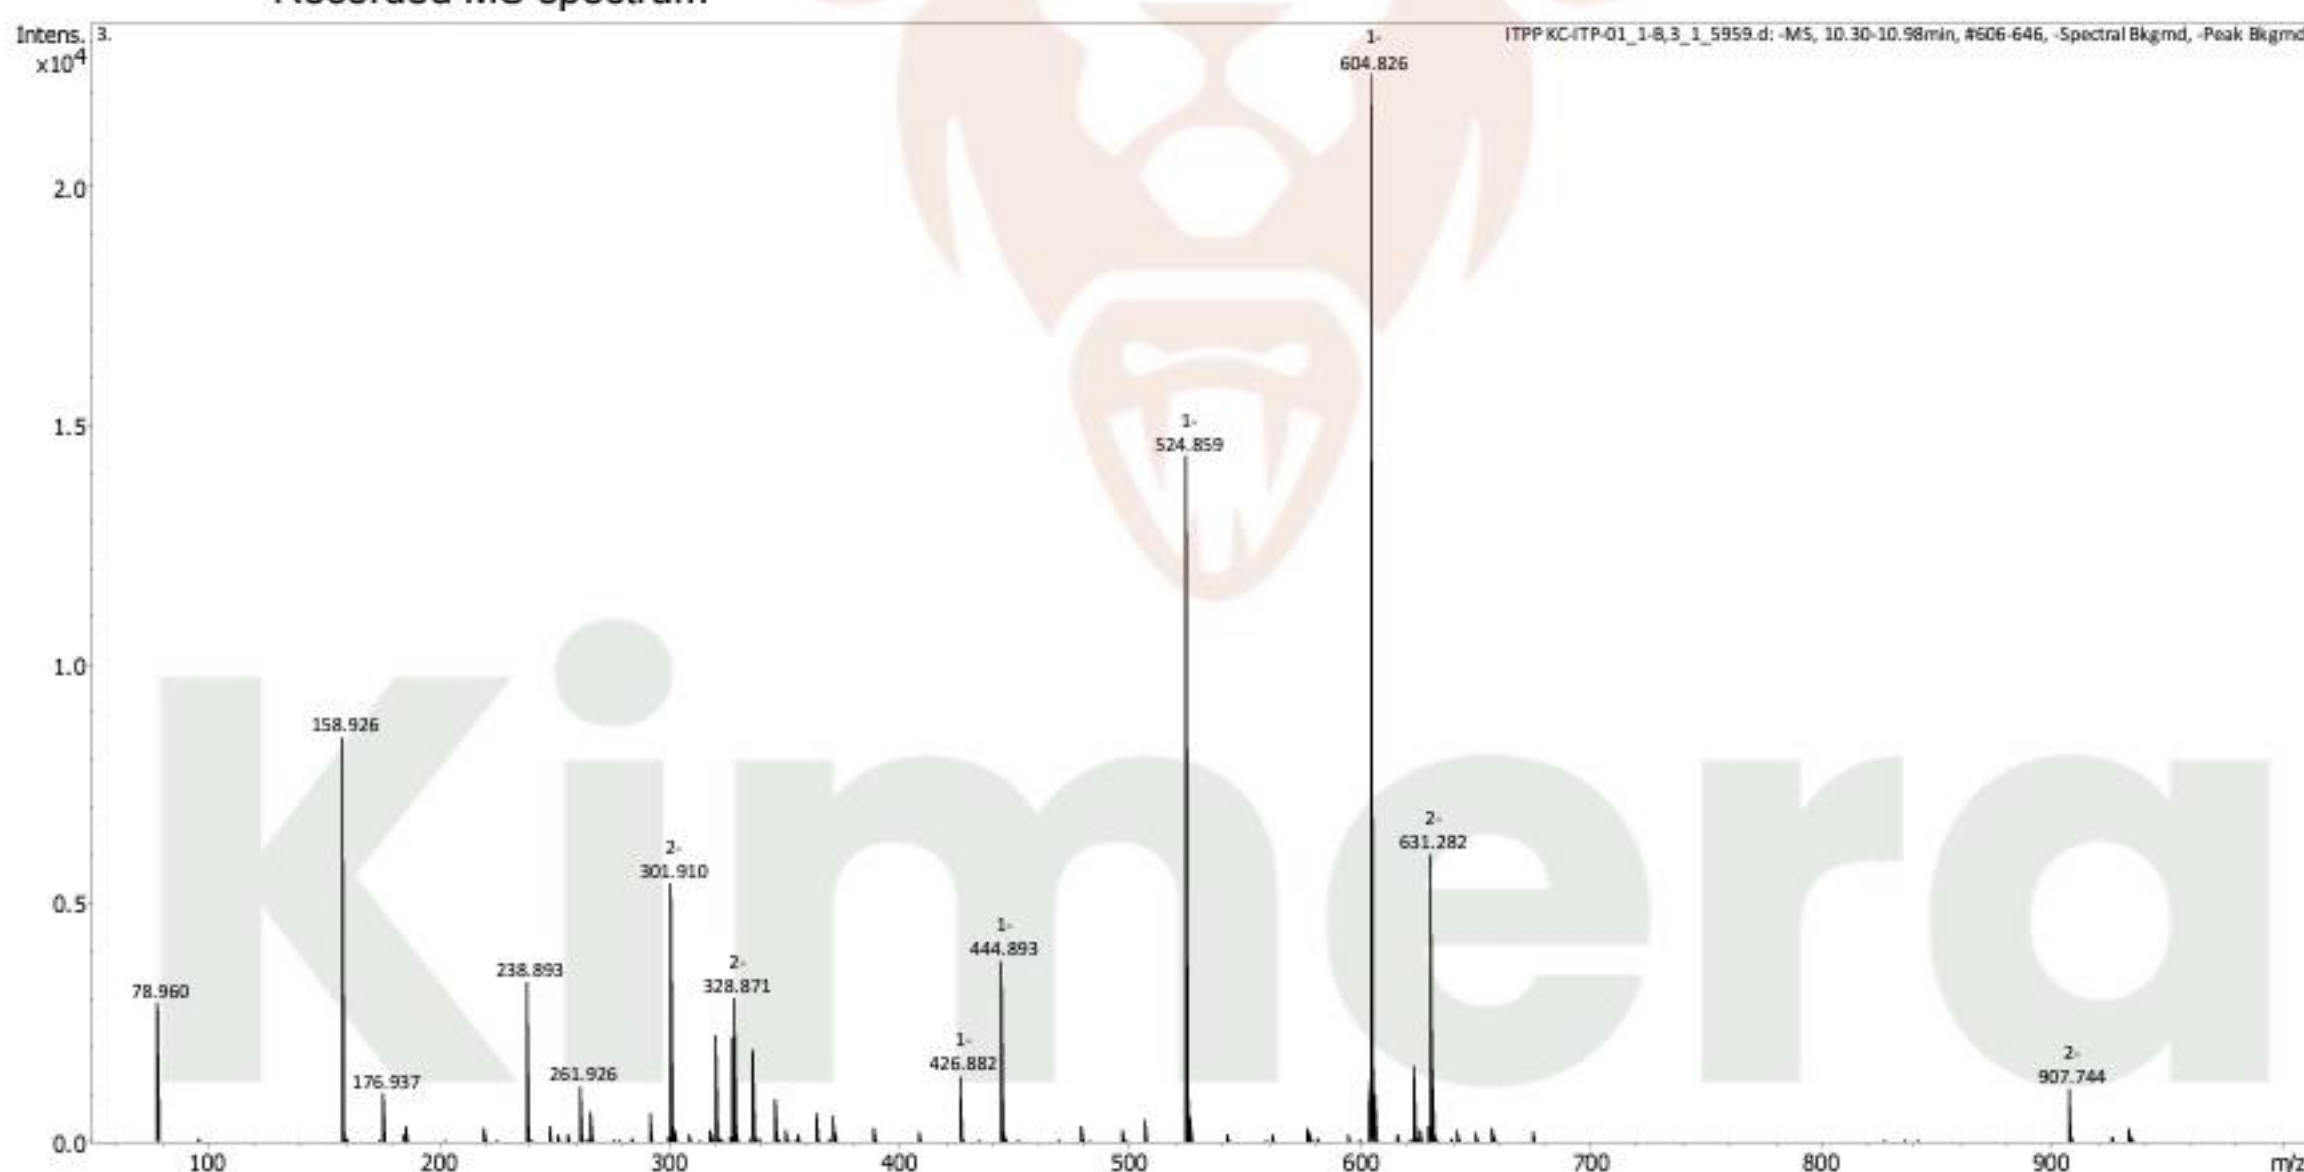

Measured monoisotopic mass : 605.83 Da

Molecular weight confirmed

Note : Monoisotopic m/z values are not easily seen in full spectrum view for larger molecules and peptides.

The dominant isotopic peak (base peak) shown in the spectrum below can be used to approximate the average molecular weight frequently reported by vendors and databases as a secondary means of confirmation.
